

# No Waste With Tower Silos

“Throughout the years we have used tower silos and bags for our feed storage. Five years ago we expanded our farm and were using up to sixteen bags a year. To cut down on bag usage, we made the decision to put up our fourth silo. With the tower silos, there is no mud and everything looks much cleaner. I didn't care for the waste of all the plastic and the pieces of plastic flying around and getting into the feed. We also appreciate that with the silos the feed keeps well and there is no mold or waste.”
