

Make Feeding Faster and Convenient

"We used a bunker for corn silage for a number of years. Feeding time was labor intense because we had to go and loosen the feed and bring it out to the front. Considering the amount of work along with the amount of feed spoilage caused us to look at alternative feed storage options.

Last summer we put up a concrete stave silo. Feeding time now is convenient and so much faster and we have definitely noticed the labor savings. Add to that the savings because of having considerably less feed spoilage and it equals savings all the way around."

- Victor & Karena Poole and their three children Nick, Hannah and Noah

Poole Acres Holstein Inc., in Perth East, Ontario, Canada,
milks 40 cows, owns 100 acres (rents another 55 acres)
and has a 20 x 90 concrete stave silo.
